

AM

EFFICIENCY

Let us present the second generation of Cleaning, Coloring and Polishing automation equipment the “**CCP-2**” from AM Efficiency

- ✓ Best Efficiency
- ✓ Fastest ROI
- ✓ Most Sustainable
- ✓ Highest Versatility
- ✓ Smallest Footprint

Simply more Efficient

Our equipment is the most efficient way to postprocess and de-powder parts produced with Additive Manufacturing from powderbed polymer technologies like SLS, MJF, SAF and HSS.

Efficiency is Key! There are many areas where we are able to achieve best efficiency. Like economically, speed and versatility. Our process delivers clean, dust free parts without any static electricity.

The CCP-2 in combination with our own developed blasting media. You may go from “print to product” in shorter time and cost. Simply more Efficient.

3 in 1 machine

No need to waste space and investments in separate units almost doing the same process. Some parts just needs to be cleaned. Then use our cleaning media together with the preset cleaning program.

Or if you prefer to get a nice dark grey even color on your parts. Then switch to the “Cleaning and coloring” blasting media.

For the most delicate parts like consumer product. Where surface quality is of highest importance. Maybe after dying or other post processing steps. Then switch to our Polishing media and start the polishing program to achieve parts with a perfect glossy and shining surface.

Machine info and data

Cabinet volume: 990 liters

Drum Volume: 65 liters

Size WxDxH: 1350x1100x1760

Power connection: 3fase, 380V 16A

Air pressure: Minimum 4,5 Bar maximum 8,6 Bar

Air Consumption: 800 liter/min

Sound level: 77 dB

Vacuum: 3 Kw (included)
